## 1. Who we are and what we offer.

We are a young team with a lot of experience in the sector. We have done projects of advanced Web pages and customized business management applications (virtual ERP). AHSI Consulting is aimed to all types of businesses that want to expand worldwide through new technologies, enhancing greatly the reach of their brand thanks our services optimization.

We develop web pages for businesses, from the most basic to the most advanced with all kinds of improvement options to choose by the client. We also have a great knowledge in programming languages (virtual ERP to measure, programs of management, app ...) having worked in projects with different countries. In addition, we have created a novel worldwide system, called **AHSI 4.0 INTERNATIONAL GAME SYSTEM**, which was used in the international solidary EXPOCHESS festival in which they participated children from 12 countries of the 5 continents.

In conclusion, our experience is based on professional projects tailored to the actual use of a company, with all its needs and variations, which has enabled us to have an extensive vision when it comes to seeing a proposal and carrying out the appropriate study.

- **Android application for management** (cod. AHSI-ANDROID):

- Application with connection and database management, registration and login of accounts. With the possibility of working online or locally and updating the work to be able to continue anywhere.

Application for android platforms in mobiles or tablets designed for those who want to manage their business or company in a simple and effective way in your own hands. Everything necessary, to measure, of the management that your business requires in the same program designed specifically for you.

In addition to being aimed at the internal management of the company, it can also be used as a means of interaction with customers/users; giving them the possibility of downloading this application in the Google Store for different purposes (contact with the company, purchases, orders, etc.).

This product has a database connection for the management that you need with the option of adding, deleting, updating ... records and data of the database with and without network, so that the program knows the most recent version of the database so that the user can work from wherever they want and can always opt for the last work done.

The application incorporates all types of aids for the user with a very complex system of data management but that greatly facilitates the work; all in one window (the client will have everything necessary in front of his eyes without having to open third programs).

## 3. REALIZED PROYECTS

A list of the latest done works.
